Deploying application

Write a shell script to clone a git repo and deploy maven based java application on tomcat.
1. Download tomcat
unzip
webapps
bin

2. write shell script
input: git repo.
clone the repo.
get inside
mvn clean package
target folder - war file
copy *.war to webapps of tomcat
$tomcat/bin/catalina.bat start

```
$ gitassignment.sh
 1    #!/bin/sh
 2    #Author : Selmi
 3    #purpose : learning for loop
 4    #Usage : ./for.sh
 5
 6    echo "Enter url of repo"
 7    read -r url
 8
 9    git clone "$url"
10
11    echo "enter directory "
12    read -r repo
13    cd "$repo"
14
15    mvn clean package
16
17    webappspath="C:\Program Files\Apache Software Foundation\Tomcat 10.1\webapps"
18    cp target/*.war "$webappspath"
19
20    binpath="C:\Program Files\Apache Software Foundation\Tomcat 10.1\bin"
21    cd "$binpath"
22    ./catalina.bat start
23
```
